Historical SkyRelief hardware dossier with modern engineering reconstruction.

Source-supported components and connectivity are distinguished from new reference implementations.

Unrecovered pin assignments, firmware parameters and code must not be treated as as-built records or electrically validated flight instructions.

SOURCE-DERIVED from authored pld_cd_1.jpg: C01-C03 only. Logical labels are not connector contacts.

C04-C13 NOT WIRED: controller outputs, power module insertion, peripherals, range and servo.

No motor location/order/phase sequence, exact polarity mating view or measured current is recovered.
