Historical SkyRelief hardware dossier with modern engineering reconstruction.

Source-supported components and connectivity are distinguished from new reference implementations. Unrecovered pin assignments, firmware parameters and code must not be treated as as-built records or electrically validated flight instructions.

REFERENCE IMPLEMENTATION — NOT VERIFIED HISTORICAL SKYRELIEF WIRING.

Do not connect a battery, power a servo rail, arm propulsion or fly an aircraft using this drawing without independent hardware-specific electrical and firmware verification.

REFERENCE IMPLEMENTATION — NOT THE HISTORICAL SKYRELIEF AS-BUILT WIRING.

NEW chosen source domain; not historical UBEC or Pixhawk rail. No connection to Pixhawk POWER.

Role terminal numbers are not servo lead order. Actual polarity, logic levels, supply current/transients, PWM endpoints, device authenticity and mechanical travel remain unverified. No physical-use approval.
